DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5 – 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Claims 5 – 7 recites the limitation "second energy" and "programmable resistance material". There is insufficient antecedent basis for this limitation in the claim. For purposes of examination, it will be assumed that claims 5 – 7 depend from claim 8.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 2829

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1 – 8 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 14 of U.S. Patent No. 6,448,576 (Davis *et al.*) in view of Uchida. Davis *et al.* recite all the limitations of claims 1 – 8 but does not recite supplying a current where substantially none of the current enters the phase change memory material. Uchida (US 4,814,853) teaches a phase change memory material where an insulating layer is applied so that the current supplying layer does not electrically contact the phase change material [Figure 17]. It would have been obvious to one of ordinary skill in the art to have none of the current enter the phase change memory material since Uchida teaches that this arrangement provides an improved heating configuration which requires less current [column 7, lines 15-30].

Further, Davis *et al.* does not recite the limitations of claim 5 where the second energy is optical energy. It would have been obvious to one of ordinary skill in the art to use optical energy to provide the heating of the programmable resistance material since it is well known in the art that heat can be transmitted by optical energy such as infrared lasers.
